

Radius 200

Radius is a revolutionary awareness system featuring Inovonics[®] Positioning Technology[™]. The system combines the latest mass notification capabilities with advanced positioning technology to provide detailed location information for pinpointing duress alarm locations. Radius' communication capability allows end users to monitor a variety of end-points, interface to fire, access control, and environmental systems with instant notification to alert devices such as cell phones, pagers, and two-way radios.

Features:

- Ideal for smaller applications
- Integrates with one additional system interface
- Fully featured Radius system for applications with up to 200 end points
- Designed to be administered by on-site personnel
- May be plugged into the LAN (local area network) to enable existing computer workstations to view and administer the Radius system
- Event History provides on-screen and electronic file reports on all events and responses
- Non-emergency messages may be programmed on-site for broadcast communication for events such as inclement weather, building closures, or other alerts

Specifications:

- Wall mountable server (16"L x 7"H x 7.5"W)
- Windows XP
- 3.2GHz CPU
- 1GB RAM
- Adaptec PCI RAID card for RAID 1 (mirrored)
- 250GB 24x7 rated hard drive
- On board video
- 10/100 LAN
- Two serial ports
- Four voice ports, expandable to 24 (optional)
