

Unique security challenges and distinctive solutions

Environmental Monitoring in Retail

Inovonics has been supplying wireless burglary and intrusion monitoring products to the commercial security industry for more than 20 years. In that time, we have had the privilege of helping protect some of the most prominent sites in the world, serving as an integral part of the security systems used to protect everything from sensitive United States government buildings to world-renowned entertainment venues.

Problem:

Broken pipes, water damage, and heat damage are a major concern for retailers. Whether it be in storage areas or on the main sales floor, retailers need a way to monitor their stores and be notified of any environmental changes that could be cause for concern.

Solution:

Inovonics offers a quick and cost-effective solution that allows the monitoring of temperature and humidity in retail environments. Installers can simply connect the environmental monitoring device of choice to an Inovonics universal transmitter and install in a utility room, closet, or other discreet location. The transmitters are then programmed to an add-on receiver connected to a head-end panel. When the environmental sensor reaches a pre-programmed threshold selected by the installer, the transmitter sends an alarm to the panel. Repeaters can be installed throughout the store to ensure complete coverage of the site, and the monitoring equipment can be easily removed and relocated as seasonal layouts change.

Before your next security installation, take a few minutes to understand how Inovonics products can help you lower the installation cost, boost profitability, and increase your customer's satisfaction.

Suggested Equipment List:

Inovonics Equipment

EN1210EOL	Universal transmitter with end of line resistor
EN4232MR	32 Zone multi-condition receiver with relay outputs
EN5040-T	High power repeater with transformer

Windland Electronics Environmental Equipment:

WB350	WaterBug®
HA-1	Humid-Alert®
TA-1/TA-2HL	Temp°Alert®
