

Better Security Helps Drive Higher Retail Profits

Retail crime costs business owners billions of dollars every year, according to the National Retail Federation. Theft, vandalism, and physical harm to people and property call for more robust security solutions, beginning with intrusion detection and panic notification.

The Inovonics Intrusion System

The system provides a better way to protect inventory, staff, customers, and profits across retail locations while also helping to reduce energy costs by remotely monitoring critical systems like refrigeration and HVAC. Our wireless-first security solutions deploy quickly, scale easily, and provide the protection retailers need while also enhancing overall operations.

A Smarter, Better Retail Security Solution

The Inovonics Intrusion System employs our proven 900MHz wireless mesh network technology to connect wireless security sensors, monitoring devices, and an expansive repeater network without running any cables. A centralized gateway panel manages everything through cloud-based tools that you can access and control via a wired touch pad or from your smartphone. Installers can add existing wired zones or go fully wireless.

Value-Added Performance Features:

- Reliable coverage — everywhere
- Fast and easy installation reduces costs
- Flexible wireless sensor deployment
- User friendly smartphone and touchpad control
- Built-in redundancy ensures “always-on” communications
- Remote support reduces service calls and costs
- Scalable for easy system expansion across multiple locations
- Proven reliability backed by 40 years of 900MHz wireless experience
