

Protecting Students, Staff, and Campuses with Smarter Wireless Security

Protecting students, staff, and campus facilities has become an increasingly complex responsibility for K-12 schools and higher education institutions. Schools and universities face growing security challenges—from unauthorized entry and theft to emergencies that require an immediate response.

The Inovonics Intrusion System

The system provides a better way to protect classrooms, administrative offices, residence halls, and campus facilities across K-12 schools and higher education campuses. The flexible, wireless-first system deploys quickly, scales easily, and delivers the reliable protection educational institutions need while minimizing installation time and disruption.

A Smarter, Better Security Solution for Education

The Inovonics Intrusion System employs our proven 900 MHz wireless mesh network technology to connect wireless security sensors and monitoring devices without requiring extensive new cabling throughout campus buildings. Installers can use existing wired zones or go fully wireless. A centralized gateway panel manages the system through cloud-based tools that users can access and control via a wired touchpad or smartphone.

Value-Added Performance Features:

- Reliable coverage — everywhere
- Fast and easy installation reduces costs
- Flexible wireless sensor deployment
- User friendly smartphone and touchpad control
- Built-in redundancy ensures “always-on” communications
- Remote support reduces service calls and costs
- Scalable for easy system expansion across multiple locations
- Proven reliability backed by 40 years of 900MHz wireless experience
